Project 1

- Mark Beavers
- DATA 110 Fall 2026

Question:

- What is the relationship between the number of ground duels won (Player winning or stealing the ball on the ground) and the number of clean sheets (Games with no goals conceded)? Does a player who has more won ground duels end up with more clean sheets in a season?

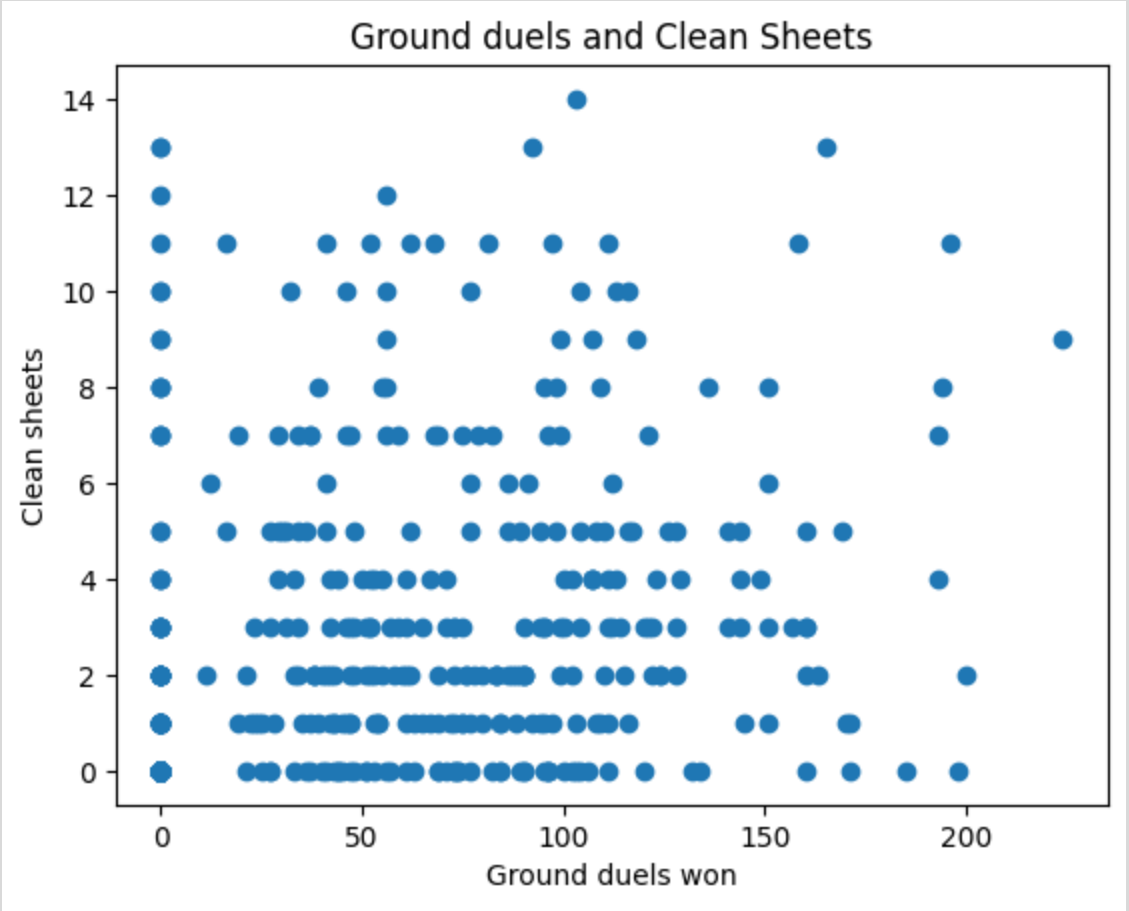

- Dataset: English Premier League Players Statistics for the 2024/25 Season.

Exploratory Data Analysis

- Dataset includes stats on 562 players for the 2024/25 season.
- Data types include integer and object.
- 1 Missing value in "gDuels Won", and 1 missing value in "Clean Sheets".
- Mean ground duels won by a player in 24/25 season was 42.76.
- Mean clean sheets per player in 24/25 season was 2.17.

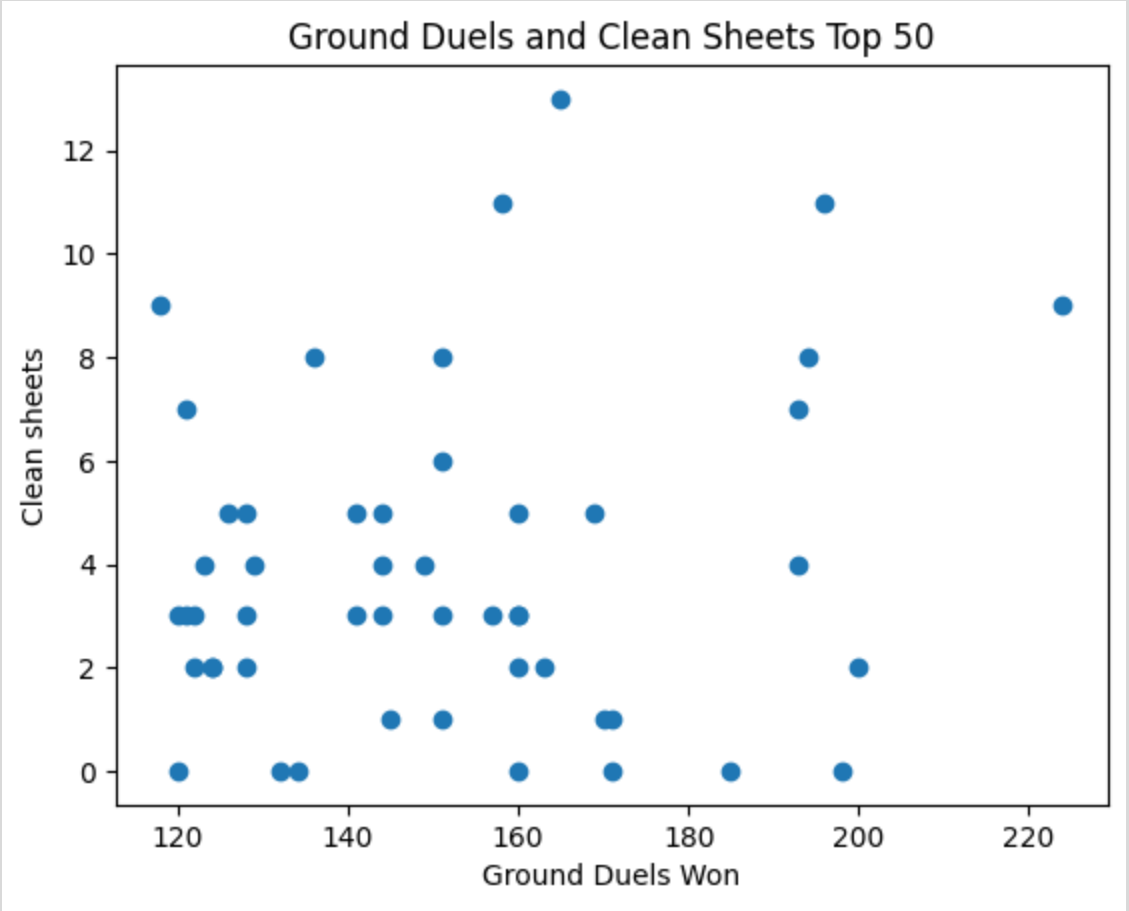

Scatterplot of all players.

Scatterplot shows all players while comparing clean sheets and ground duels.

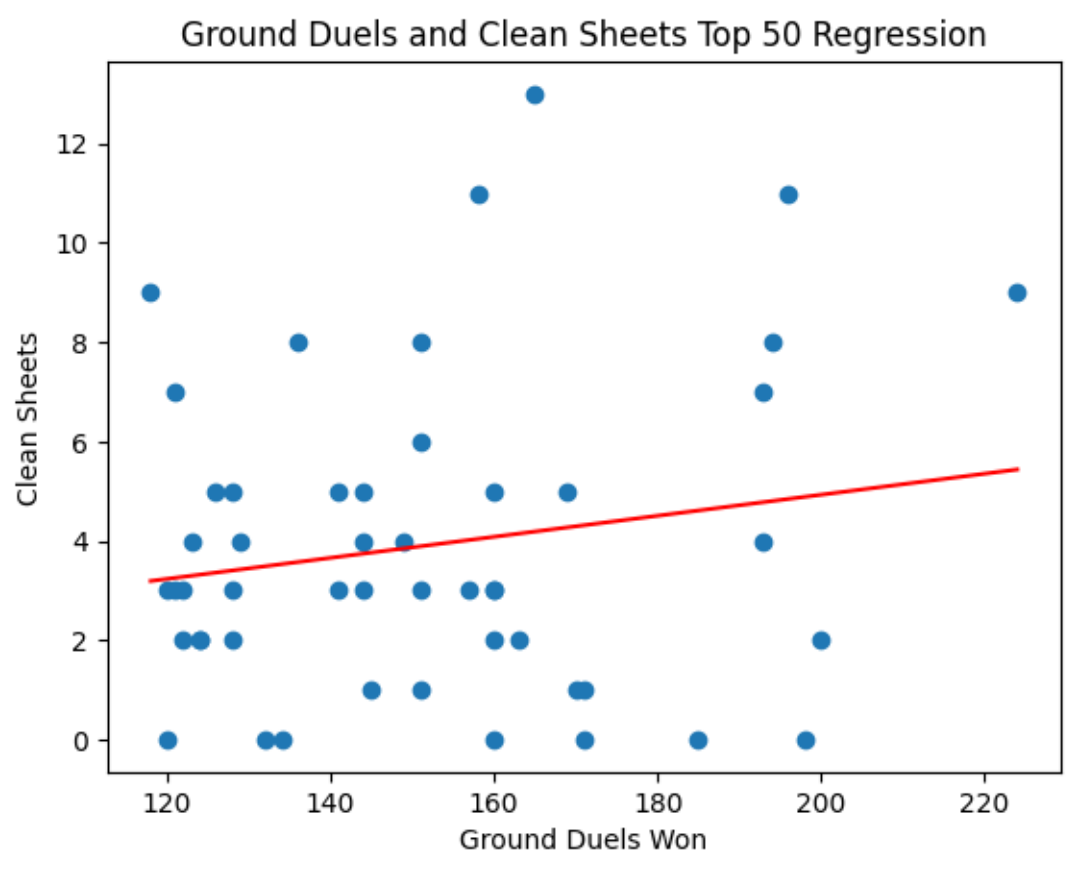

Scatterplot for top 50 players by ground duels.

Player with the most won ground duels does not have the most clean sheets.

Regression line on top 50.

Slight positive correlation between players winning ground duels and having clean sheets.

Future Questions

- What other factors affect number of clean sheets in a season? (Aerial duels, interceptions, blocks, tackles)
